Aversure Data Room Service

Aversure Data Room Service enables the secure exchange of documents through virtual data rooms in a user-friendly environment.

It is commonly used for:

- Property and company transactions
- Investor fund reporting
- Document sharing within projects

In transactional contexts, the service supports the entire deal lifecycle – from information gathering and marketing to due diligence.

Security and access control are central to the platform. User permissions can be customized to match the specific needs of each project.

Aversure Data Room Service is:

- Intuitive and easy to use – no prior instruction is required
- Designed for professional use, with a polished and reliable interface
- Secure by design, with strict access controls and comprehensive activity logging

USE OF THE SERVICE

Files and folders are organized in an interface that mirrors standard desktop file browsers, making the system highly intuitive. Most users can navigate and use it without guidance.

The service is accessible via all major web browsers. Uploading is simple – files and folders can be dragged directly from the desktop into the browser. Entire data rooms can be uploaded or downloaded through the browser interface.

Uploaded files are automatically indexed, with the option to assign indexes manually. Users can view recently updated files and receive email notifications when changes occur.

The built-in Q&A module supports the entire Q&A process within the data room and can be tailored to suit the complexity of each project.
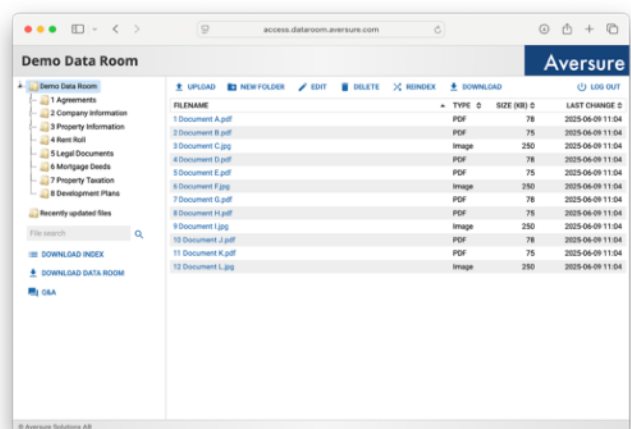

ADMINISTRATION

Administration is straightforward. Users can be added or removed quickly, and a range of tools makes managing a data room efficient:

- Drag-and-drop uploads of entire data rooms
- Exportable data room content lists (Excel)
- Zip downloads of individual folders or entire data rooms
- Add users in bulk to a data room
- Integrated and multiple Q&As
- Full-text PDF search
- Restrictions on PDF downloads and printing
- PDF watermarking
- One-click disclaimers
- Real-time usage statistics

Aversure manages the service infrastructure and ongoing development. No special hardware, software installations, or technical skills are required to operate a data room.

Customization options include:

- Flexible folder structures – no fixed templates enforced
- Branding with a custom logo
- Branding with a custom color scheme (subscription agreements only)

Aversure

TRIED AND TESTED

Aversure Data Room Service is proven and trusted, with over 50 000 users, more than 1 000 data rooms set up annually, and a track record spanning over a decade.

The system is highly scalable. While most data rooms are are far smaller, the service is equipped to handle data rooms in the 100s of gigabytes with hundreds of thousands of files.

SECURITY

Security is built into every layer of the Aversure Data Room Service. All user activity is logged and made available in real time to administrators.

Document access permissions can be set at the folder level, ensuring users only see what's relevant to them.

Aversure Data Room Service is hosted on infrastructure certified under SSAE 16 Type II and ISAE 3402 Type II, meeting stringent standards for both physical and information security.

All communication with the service is encrypted using SSL.

PRICING AND TERMS

Aversure offers clear, transparent pricing – no hidden fees or unexpected charges.

Each data room includes 12 months of access, with ample storage and user capacity for most projects.
